At Winclove Probiotics, developer, researcher and producer of the Ecologic® formulation range [2] we rely on research as the foundation of our products. We perform in vivo experiments and conduct clinical trials to study the safety and efficacy of our probiotic formulations for a plethora of indications. Because of this approach, Winclove’s researchers frequently achieve breakthroughs in the field of microbiota-management. Because of this approach the effort of Winclove’s researchers are frequently published in scientific peer reviewed publications every year.
